

TOWN OF LUNENBURG

TOL2026007

ADDENDUM #2

Does the Town have any existing traffic, collision, or survey data?

The Town has data on measured speed and vehicle counts we have recently started collecting along Victoria (near James) that we can share with the successful proponent. No similar information exists for Maple. Collision data may be available via the RCMP.

Can the Town provide detail on the expected final deliverables?

The Town envisages a Report (with relevant supporting details) in the form of a Study outline recommendations and assessing the viability of potential the new active transportation infrastructure at each location. Supporting details may include items like concept drawings, scenarios, safety documentation, etc. to substantiate their position.

Are any design drawings expected and to what detail (Conceptual, Functional, ...)?

Drawings should be provided to a level that supports the successful Proponent's recommendations if necessary. It is not envisaged that these be full design Drawings though.

If a Functional Design is required, does the Town expect topographic surveys to be completed or is available Lidar data sufficient?

Drawings should be provided to a level that supports the successful Proponent's recommendations if necessary. It is not envisaged that these be full design Drawings though.

Should street lighting be included in the assessment?

If street lighting is considered to be part of the assessment to "determine if sidewalks and/or a marked crossing is suitable, appropriate, safe and practical", then yes.

Is there a desired deadline for completion of the project? How is the project timeline being evaluated?

Although not critical, ideally the Town is hoping the Viability Study can be completed by the end of August 2026 to allow subsequent Capital Budget work to be initiated.

Does a hard copy of the proposal need to be submitted or is an electronic submission sufficient?

Electronic submission is acceptable.

Please confirm that technical and pricing information should be submitted together in one pdf.

A single document is acceptable.

Extension to the proposal closing date to May 20, 2026.
